OPTIONS

Simple & Easy setup Color area sensor

- All in one color vision sensor
- Color resolution : 15,000 colors
- Stable color detection by calculating hue of each pixel

Wide range line-up

CVSE1-N20-RA Standard type
CVSE1-N10-RA Long range type
CVSE1-N40-RA Macro view type
CVSE1-N21-RA Narrow view type

Three-Step-Teaching

Teaching is easily done by three steps even in 30 seconds just like a color sensor.

Step1 Set field of view

Step2 Set color

Color list

Step3 Completed with the final adjustment

All in one

The sensor has a built-in Camera, LED Lighting, Display monitor and Controller. This structure enables water resistance IP67.

Quick change over

16 Banks are available. You can remotely select the bank to use by PLC or other equipments.

Color Resolution

Up to 15,000 colors are available to detect.

Stable inspection

It calculates color hue of each pixel so stable inspection is available.

Wide coverage line-up

You can choose from 4 inspection range/field of view according to inspection target condition.

High performance

Setup Adjustable while line is running

CVSE1-RA provides output with the setup parameters given even while you are adjusting setup. You don't have to stop the line.

CVSE1-RA has two processing unit individually so it can change parameters while vision processing is running without delay.

One threshold mode

Determine OK when the area that the color matches exceeds the threshold.

Two threshold mode

Determine OK when the area that the color matches is in two thresholds.

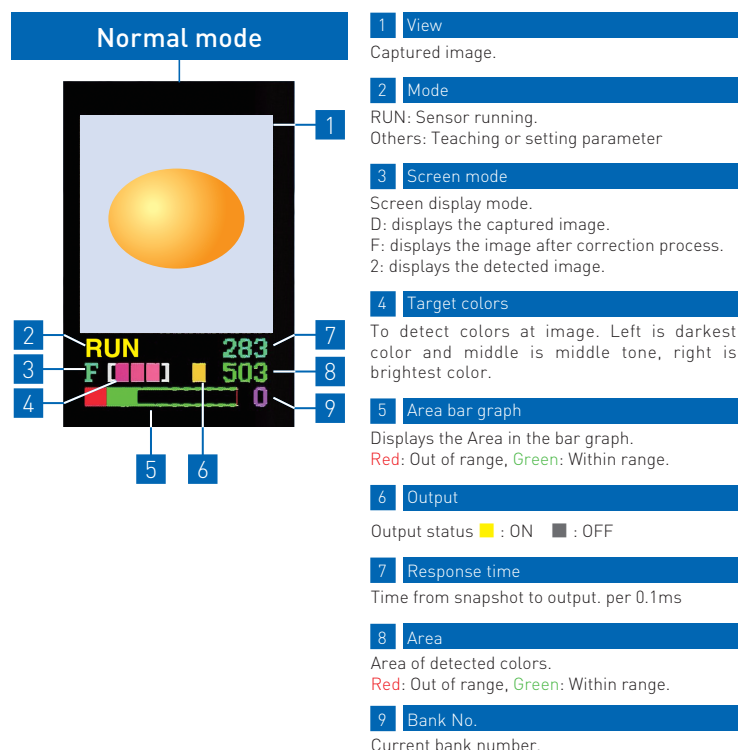

Stable inspection

It calculates color hue of each pixel that prevents miss-inspection affected by external light and brightness changes of lighting. Stable inspection is available and you can setup CVSE1-RA just like you do for photoelectric sensor.

Display

There are two modes : Normal / Setup

Switches

Tips for mounting CVS series

- Please determine Working distance and Field of View so that you choose correct model number of CVS series.
- Please use M4 * 50mm screws to mount CVS series
- Please take care about distance between CVS and target object to get stable size of Field of View.
- Please mount CVS at 15 to 45 degree to prevent specular reflection from the object especially from glossy object.
- When the object moves fast, you have to set shutter speed shorter. Then, you will need brighter lighting to get better image. Please try external lighting in this case.
